LEARNERS' MONTHLY REPORT FOR THE MONTH OF: January/February

Prepared and Submitted by: **Yonela Sitshaka**

Date of Submission: 23 Feb 2023

Time Period	Hours spent with supervisor	KEY PERFORMANCE AREA	KEY PERFOMANCE INDICATOR	KEY PERFOMANCE OUTCOME	COMMENTS: CHALLENGES AND OPPORTUNITIES
	Eg. 6 hours	Actual tasks that were assigned – (What did you do?)	The actual work that you did to tackle the assigned task – (How did you do it?)	The outcome from the assigned task you did – (What did you Achieve?)	What went wrong and how did you solve it?

Week 1	7 hours p/day	This time we are tasked with designing the requirements of phase two. I was tasked with designing some of the ERDs that were not previously noted to be included and also the use case diagrams followed by their activity diagrams.	It was only a matter of understanding the flow of the system which I do. So delivering the diagrams was not a problem as we have been doing this since university and throughout the internship.	Phase two UML diagrams	There were not problems as the one year experience comes to play.

Week 2	7 hours per/day	As we are no longer coding the project the next thing was and is to focus on the project design. Here we have tasked with designing the front end of the project.	As a team of two, we designed a screen where a user can see the club profile. This includes the contact details of the club and other club-related details such as the club achievements and the executive members of the club	Club profile screen.	The problem was that I am a back-end person so using the designing tools was kind of a new thing to me, so this problem was solved by making me a team of two with a team member that was always a front end person.

Week 3	7 hours per/day	Every week we are tasked with new screens to design as we are preparing the project for the next interns.	As I was learning while doing , I was tasked with designing a screen where the user can see the clubs they joined and which federations they belong to.	Person profile summary screen	It is no hard fast learn things for so there were not problems anymore.

Week 4	7 hours per/day	We continue to work on the screens as we define the requirements	I had to go back and perfect some of the designs as the project leader had specified.	Project design screens	No problems encountered.

Overall Learning this month:

(a) **What new skills or competencies did you acquire during this month?**

Front-end design on of the skills I gained this month.

_____

(b) **Also mention any highlights or innovations you have come up with.**

No new innovations as I am quiet still new to front-end designing.

_____

_____

(c) What areas of improvement will you focus on for the new month?

I only need to improve the same skills to be better
